

# Reexam in Calculus

20. february 2019

### Exercise 1 (6 point)

A function is defined by

$$f(x, y) = 1 + \frac{y^2}{x^2}$$

for real variables  $x$  and  $y$ .

(a) (3 point) The domain of definition of  $f$  consists of all points  $(x, y)$  which obey

- |                                     |  |                                      |
|-------------------------------------|--|--------------------------------------|
| <input type="checkbox"/> $x < 0$    | <input checked="" type="checkbox"/> $x \neq 0$ | <input type="checkbox"/> $yx \neq 0$ |
| <input type="checkbox"/> $y \neq 0$ | <input type="checkbox"/> $x \neq 0$ og $y > 0$ | <input type="checkbox"/> $y^2 = x^2$ |

(b) (3 point) What is the level set  $f(x, y) = 2$ ?

- A parabola  $x = y^2 + 1$
- A parabola  $x = y^2 - 1$
- A circle with center at origin and radius 1
- A circle with center at origin and radius 2
- Two straight lines  $x = \pm y$  without the origin.

### Exercise 2 (6 point)

A parametric curve in space is given by

$$\mathbf{r}(t) = \langle t, -t^2, e^t \rangle$$

where the parameter  $t$  can be any real number.

(a) (3 point) What is the velocity?

- |  |   |  |
|--|---|--|
| <input type="checkbox"/> $\langle 1, -2t, e^t \rangle$ | <input type="checkbox"/> $\sqrt{5 + e}$   | <input checked="" type="checkbox"/> $\sqrt{1 + 4t^2 + e^{2t}}$ |
| <input type="checkbox"/> $\sqrt{1 - 2t + e^t}$         | <input type="checkbox"/> $\sqrt{4 + t^2}$ | <input type="checkbox"/> $\sqrt{1 - 4t^2 + e^{2t}}$            |

(b) (3 point) Which of the following vectors represent the acceleration vector at  $t = 0$ ?

- |   |   |  |
|---|---|--|
| <input type="checkbox"/> $\langle 0, -1, 0 \rangle$ | <input type="checkbox"/> $\langle 0, -2, 0 \rangle$ | <input checked="" type="checkbox"/> $\langle 0, -2, 1 \rangle$ |
| <input type="checkbox"/> $\langle 0, -4, 0 \rangle$ | <input type="checkbox"/> $\langle -4, 0, 1 \rangle$ | <input type="checkbox"/> $\langle 0, -2, e \rangle$            |

### Exercise 3 (6 point)

Three complex numbers are given by

$$z_1 = 1 - i, \quad z_2 = 2i^2 \quad \text{og} \quad z_3 = 1 + i.$$

(a) (3 point) What is  $z_1 + z_2$  in polar form?

- |  |   |  |
|--|---|--|
| <input type="checkbox"/> 0             | <input type="checkbox"/> $-2e^{i\pi/4}$                           | <input type="checkbox"/> $\sqrt{2}e^{-i\pi/4}$ |
| <input type="checkbox"/> $2e^{i\pi/4}$ | <input checked="" type="checkbox"/> $\sqrt{2}e^{\frac{5\pi}{4}i}$ | <input type="checkbox"/> $\sqrt{2}e^{i\pi/2}$  |

(b) (3 point) What is  $\frac{z_1}{z_3}$  in standard form?

- |  |                               |                                |
|--|-------------------------------|--------------------------------|
| <input type="checkbox"/> 1               | <input type="checkbox"/> $i$  | <input type="checkbox"/> $-2i$ |
| <input checked="" type="checkbox"/> $-i$ | <input type="checkbox"/> $2i$ | <input type="checkbox"/> $i/2$ |

### Exercise 4 (10 point)

(a) (5 point) A homogeneous second order differential equation is given by

$$y'' = 2y'.$$

Below there are given several functions where  $c_1$  and  $c_2$  are arbitrary real constants. Mark the expression which corresponds to the general solution of the differential equation.

- |   |   |
|---|---|
| <input type="checkbox"/> $y(t) = c_1e^{-t} + c_2e^t$        | <input checked="" type="checkbox"/> $y(t) = c_1e^{2t} + c_2$  |
| <input type="checkbox"/> $y(t) = c_1 \cos(t) + c_2 \sin(t)$ | <input type="checkbox"/> $y(t) = c_1 \sin(2t) + c_2 \cos(2t)$ |
| <input type="checkbox"/> $y(t) = c_1 + c_2t$                | <input type="checkbox"/> $y(t) = c_1t^2 + c_2t$               |
| <input type="checkbox"/> $y(t) = c_1 + c_2t^2$              | <input type="checkbox"/> $y(t) = c_1 + c_2e^t$                |

(b) (5 point) Mark the solution  $x(t)$  to the inhomogeneous differential equation

$$x''(t) = 2x'(t) + 1, \quad x(0) = 0, \quad x'(0) = 0,$$

among the following expressions:

- |  |   |
|--|---|
| <input type="checkbox"/> $x(t) = t^2$                            | <input checked="" type="checkbox"/> $x(t) = -\frac{t}{2} + \frac{1}{4}(e^{2t} - 1)$ |
| <input type="checkbox"/> $x(t) = -4t^2 + 1$                      | <input type="checkbox"/> $x(t) = t - e^{2t}$  |
| <input type="checkbox"/> $x(t) = t - te^{2t}$                    | <input type="checkbox"/> $x(t) = t - \sin(2t)$                                      |
| <input type="checkbox"/> $x(t) = e^{2t} - 1 + t^2 - \frac{t}{2}$ | <input type="checkbox"/> $x(t) = t - \cos(2t)$                                      |

### Exercise 5 (8 point)

Answer whether the following statements are true or false.

- (a) (2 point) The velocity vector and the unit tangent vector have always the same length.

True

False

- (b) (2 point) When a point moves on a circle, the curvature is constant.

True

False

- (c) (2 point) The product of any two real functions which are both differentiable at a point, is also differentiable at that point.

True

False

- (d) (2 point) The function  $f(x) = \sin(x)$  where  $0 \leq x \leq 2\pi$ , has an inverse function.

True

False

### Exercise 6 (7 point)

A domain  $\mathcal{R}$  in the plane can be represented with the help of the inequalities  $4 \leq x^2 + y^2 \leq 9$  and  $x \leq y$ .

- (a) (3 point) Which of the following inequalities show, that a point with coordinates  $(x, y) = (r \cos(\theta), r \sin(\theta))$  belongs to  $\mathcal{R}$ ?

$r \geq 2, \quad 0 \leq \theta \leq \pi$

$4 \leq r \leq 9, \quad \theta = \pi/2$

$4 \leq r \leq 9, \quad \pi/4 \leq \theta \leq 5\pi/4$

$r \leq 9$

$2 \leq r \leq 3, \quad \pi/4 \leq \theta \leq 5\pi/4$

$2 \leq r \leq 3$

- (b) (4 point) What is the area of the domain?

$\pi/2$

$3\pi/2$

$5\pi/2$

$\pi$

$2\pi$

$3\pi$

### Exercise 7 (8 point)

A region  $\mathcal{R}$  in the plane consists of all the points with coordinates  $(x, y)$  which satisfy

$$\sqrt{x^2 + y^2} \leq 2.$$

A function  $f$  is defined on  $\mathcal{R}$  and is given by  $f(x, y) = x^2 + 2y^2$ .

(a) (4 point) Which of the following points is an inner critical point for  $f$ ?

$\langle 0, 1 \rangle$

$\langle 1, 1 \rangle$

$\langle 0, 0 \rangle$

$\langle 1, -1 \rangle$

$\langle 1, 0 \rangle$

$\langle -1, -1 \rangle$

(b) (4 point) What is the maximum value of  $f$ ?

2

6

10

4

8

12

### Exercise 8 (12 point)

A surface  $\mathcal{F}$  in space is determined by the equation  $F(x, y, z) = 0$ , where

$$F(x, y, z) = x^2 + y^2 - 2z^2.$$

(a) (6 point) Which of the following equations correspond to the tangent plane to  $\mathcal{F}$  at the point  $P = (1, 1, 1)$ ?

$3 = x + y + z$

$z = -x + 2y$

$z = 1$

$2z = x + y$

$z = -y + 2x$

$0 = 3x + 2y - 5z$

(b) (6 point) From the equation  $F(x, y, z) = 0$ , what is the partial derivative  $\partial z / \partial y$  at the point  $P$ ?

$-1$

$-1/2$

$3/5$

0

$1/2$

4

### Exercise 9 (12 point)

A function is given by

$$f(x, y) = \ln(e^x + y),$$

where  $x > -1$  and  $y > 0$ .

- (a) (2 point) Mark whether the following statement is true or false:  $f(x, y)$  can never be less than zero.

True

False

- (b) (2 point) Mark whether the following statement is true or false:  $f(x, y)$  is always less than 100.

True

False

- (c) (4 point) What is the directional derivative  $D_{\mathbf{u}}f(P)$  at the point  $P = (0, 1)$  and direction given by the unit vector  $\mathbf{u} = \langle 1, 0 \rangle$ ?

1

3

4

2

$\sqrt{2}$

$\frac{1}{2}$

- (d) (4 point) Which of the following unit vectors point in the direction in which  $f$  grows fastest starting from  $P$  (the direction  $\mathbf{v}$  for which  $D_{\mathbf{v}}f(P)$  is maximal)?

$\langle -\frac{2}{\sqrt{5}}, -\frac{1}{\sqrt{5}} \rangle$

$\langle \frac{2\sqrt{5}}{5}, -\frac{1}{\sqrt{5}} \rangle$

$\langle 0, -1 \rangle$

$\langle -1, 0 \rangle$

$\langle \frac{\sqrt{5}}{5}, \frac{2\sqrt{5}}{5} \rangle$

$\langle \frac{1}{\sqrt{2}}, \frac{1}{\sqrt{2}} \rangle$

$\langle \frac{1}{\sqrt{5}}, -\frac{2}{\sqrt{5}} \rangle$

$\langle 1, 0 \rangle$

$\langle -\frac{1}{\sqrt{2}}, \frac{1}{\sqrt{2}} \rangle$

### Exercise 10 (9 point)

A function is given by

$$f(x) = x^2 + \sin(2x)$$

for all real numbers  $x$ .

- (a) (5 point) Mark the correct expression for  $f'''(x)$  (i.e. the third order derivative of  $f$ )

- |  |   |  |
|--|---|--|
| <input type="checkbox"/> $\cos(2x)$    | <input type="checkbox"/> $8 \cos(2x)$             | <input type="checkbox"/> $8 \sin(2x)$  |
| <input type="checkbox"/> $-2 \cos(2x)$ | <input checked="" type="checkbox"/> $-8 \cos(2x)$ | <input type="checkbox"/> $-8 \sin(2x)$ |

- (b) (4 point) Which one of the following expressions gives the third order Taylor polynomial for  $f$  when the developing point is  $a = 0$ ?

- |  |   |  |
|--|---|--|
| <input type="checkbox"/> $1 + x + x^2 + x^3$ | <input type="checkbox"/> $-x + x^2 - x^3/6$             | <input type="checkbox"/> $2x + x^2$        |
| <input type="checkbox"/> $1 + x^2/2 + x^3/6$ | <input checked="" type="checkbox"/> $2x + x^2 - 4x^3/3$ | <input type="checkbox"/> $2x + x^2 - 4x^3$ |

### Exercise 11 (11 point)

A curve in the plane is given by

$$\begin{aligned}x(t) &= \cos(2t), \\y(t) &= \sin(t)\end{aligned}$$

for all real numbers  $t$ .

- (a) (2 point) For which positive value of the parameter  $t$  does the curve get back to the point  $P = (1,0)$  for the first time? (Note that the curve is at  $P$  when  $t = 0$ .)

- |                                  |                                  |                                  |   |                                 |
|----------------------------------|----------------------------------|----------------------------------|---|---------------------------------|
| <input type="checkbox"/> $\pi/8$ | <input type="checkbox"/> $\pi/4$ | <input type="checkbox"/> $\pi/2$ | <input checked="" type="checkbox"/> $\pi$ | <input type="checkbox"/> $2\pi$ |
|----------------------------------|----------------------------------|----------------------------------|---|---------------------------------|

- (b) (5 point) What is the curvature at  $P$ ?

- |                            |                            |                            |                                       |                            |
|----------------------------|----------------------------|----------------------------|---------------------------------------|----------------------------|
| <input type="checkbox"/> 1 | <input type="checkbox"/> 2 | <input type="checkbox"/> 3 | <input checked="" type="checkbox"/> 4 | <input type="checkbox"/> 5 |
|----------------------------|----------------------------|----------------------------|---------------------------------------|----------------------------|

- (c) (4 point) What is the value of the velocity when  $t = \pi$ ?

- |                                       |                            |                            |
|---------------------------------------|----------------------------|----------------------------|
| <input type="checkbox"/> 0            | <input type="checkbox"/> 2 | <input type="checkbox"/> 4 |
| <input checked="" type="checkbox"/> 1 | <input type="checkbox"/> 3 | <input type="checkbox"/> 5 |

### Opgave 12 (5 point)

The figure below shows the graph of a function

$$r = f(\theta), \quad 0 \leq \theta \leq 2\pi,$$

expressed in polar coordinates. The graph represents a cardioid.

One of the expressions below corresponds to the figure. Which one?

$f(\theta) = 1 + \sin(2\theta)$

$f(\theta) = \sin^2(\theta) - \cos(\theta)$

$f(\theta) = 1 - \cos(\theta)$

$f(\theta) = \cos(\theta) \sin(\theta)$

$f(\theta) = 1 + 2 \sin\left(\frac{\theta}{2}\right) \cos\left(\frac{\theta}{2}\right)$

$f(\theta) = \frac{2 - \sin(\theta)}{2}$
